

EMERGENCY PROCEDURES – STRIPPING LINE

- In the event of an emergency (ex: something gets stuck in/on push arm) push any of the 4 red emergency e-stops underneath the stripping line
- Once this emergency stop has been pushed, make sure you or someone close to you pushes the emergency e-stop on the panel (located left of stripping line)
- Ensure all items, and persons are clear, and area is deemed safe
- Once area has been cleared you can begin to restart system
- Start by releasing e-stop on stripping line, then the e-stop on the panel (twist and pull out)
 - Once these have both been unlocked, push the yellow reset button, and then the green start button on the panel
- This will reset the push arm that has been stopped and stripping line will be back in service
 - Please remember to fill out a SIMS report after incident has occurred or notify management
